RELFECTIONS Q&A

1. Did your estimations reflect the actual effort?

Answer:

Yes, the story point estimations reasonably reflected the actual effort required. The higher-point stories required more effort and complexity, while the lower-point stories were relatively simpler to complete.

2. Was your backlog well-prioritized?

Answer:

Yes, the backlog was well-prioritized. High-priority User Stories were placed ahead of the medium-priority stories, which helped us focus on the most important functionality first.

3. How did your simulated sprint align with your plan?

Answer:

The simulated sprint aligned well with the plan. The User Stories were moved from **To**

Do → In Progress → Done, and all the planned stories were completed within the sprint.

4. What insights did the burndown chart give about your team's capacity?

Answer:

The burndown chart helps show how quickly the team completed the planned work during the sprint. It gives an indication of the team's capacity and whether the amount of work planned was realistic for the sprint duration.
